17. (Amended) A colour printhead comprising an elongate array of blocks of print elements extending side by side in an array direction, the printhead being configured for relatively traversing a surface to be printed in other than the array direction, the blocks being arranged to print swaths of different colours side by side in a repeating pattern during said relative traverse, each swath being wider than a swath printed by a single print element, the arrangement of blocks being such that relative indexing of the printhead and the surface in the array direction permits printing of further swaths at least partially overprinting previously-printed swaths, wherein each overprinting swath [being] is of a different colour to the previously printed swath which it overprints [and is registry therewith].

REMARKS

In conjunction with this paper, the applicants have submitted a Notice of Appeal in this application.

Claim Objections

Claim 17 was objected to as containing informalities in language. Claim 17 has been amended according to the examiner's suggested acceptable language. Withdrawal of this claim objection is therefore respectfully solicited.

Claim 1 has been amended to incorporate the clarifying language relative to "wherein each overprinting swath is of a different color to the previously printed swath which it
